

CUSTOM HAND HELD BRANDING TOOL

WARNING: USE EXTREME CAUTION WHEN USING THIS BRANDING TOOL. KEEP SMALL CHILDREN & ANIMALS AWAY. BRANDING HEAD & ADJACENT PARTS GET EXTREMELY HOT & MAY CAUSE SERIOUS BURNS. KEEP AWAY FROM COMBUSTIBLE MATERIALS. ALWAYS WEAR SAFETY GLASSES.

- (1) Plug the branding tool into a 120 Volt, 3 prong grounded plug & allow 15-30 minutes for the tool to reach its proper temperature.
- (2) If using a Temperature Regulator, start at about 50% on the dial to determine the appropriate setting for your material (it take longer for the tool to cool down than it does to heat up). Branding temperatures & dwell times will vary greatly depending on the item being branded (hard wood, soft wood, leather, plastic, rubber, cork, etc). This will take some trial & error to figure out.
- (3) Once up to temperature, hold the branding head flat against to surface to be branded with firm pressure. The Dual Spring-Plate feature will prevent you from applying too much pressure. Again, dwell times will vary depending on the item being branded
- (4) When branding several pieces in succession, it may be necessary to let the tool set for a short period of time to recoup its heat.
- (5) Any 'overburn' on wood can be removed by a light sanding with a high grit sandpaper.
- (6) Allow the tool to cool for 1-2 Hours before storing it.
- (7) Do NOT put the branding tool in water to cool it off. It will cause damage to the tool and my cause personal injury.
